

CLEARING THE AIR

COMBATting AIR POLLUTION

DIFFERENT TYPES OF AIR POLLUTION

Indoor (household) air pollution caused by cooking stoves, heating and lighting

More than **3 billion people** use solid fuels and **open fires** for cooking and heating

Outdoor (ambient) air pollution caused by emissions from power generation, transport, industrial furnaces, brick kilns, wildfires, agriculture, dust and sand storms

90 out of 193 countries do not have vehicle emission standards

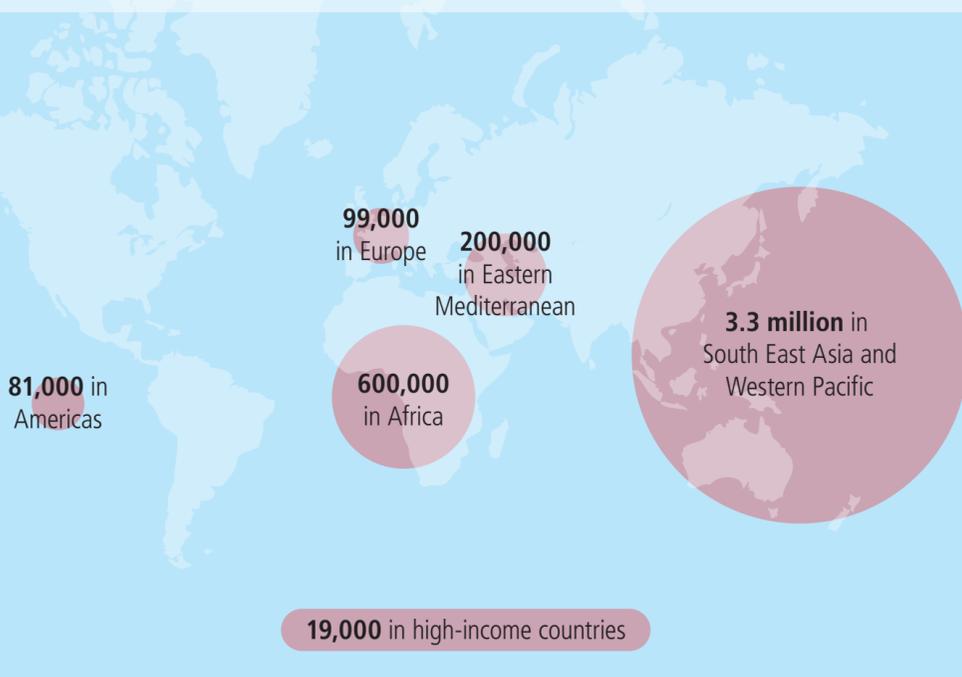

86% of countries practice **open burning** of agricultural and/or municipal **waste**

AIR POLLUTION: THE BIG KILLER

Each year **7-8 million people** die prematurely because of poor air quality

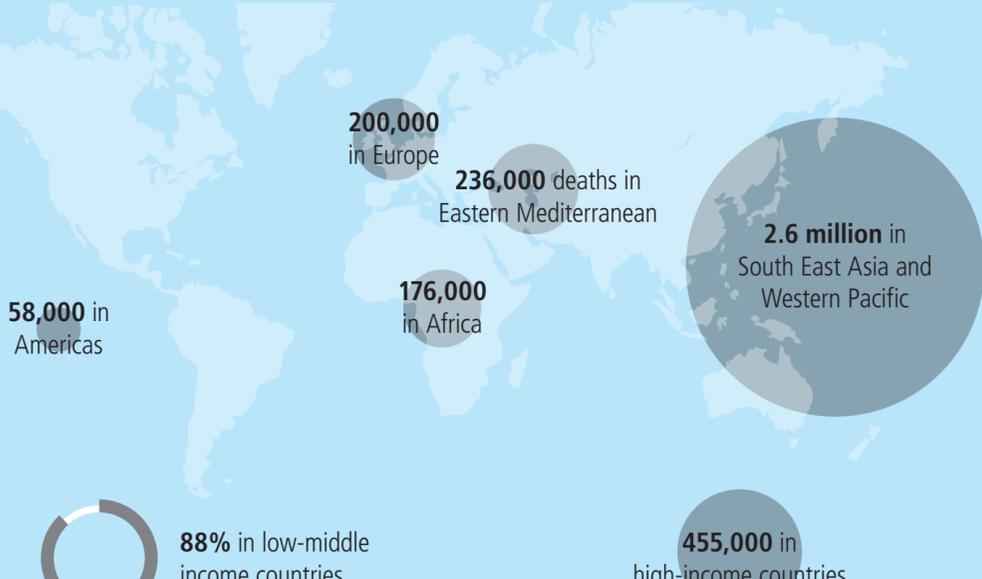

4.3 million deaths are attributed to **indoor air pollution from cooking**: this is mostly in **low and middle-income countries**

2 million deaths every year caused by respiratory infections because of indoor air pollution; **800,000** of these are **children below the age of five**

3.7 million deaths attributed to outdoor air pollution

88% in low-middle income countries

Over half of world's population lives in urban areas; **only 12% of cities** have air quality measures that meet **WHO standards**

Ground level ozone impacts food security by **reducing crop yields** by up to **50 million tons** each year

Financial cost of environmentally related **health risks** are in the range of **5%-10% of GDP**, with air pollution taking the highest toll

WHAT CAN YOU DO?

Advocate for better air quality:

Provide **clean cooking and heating stoves** to rural communities

Don't **openly burn** waste

Use **cleaner-burning** fuels

Prioritize the use of **walking, cycling** or rapid **urban transit** over private vehicles

Switch to **clean diesel** and improved engines for transport and freight

Ensure industries use **clean technologies**

Have stricter vehicle emissions and efficiency **standards**

Establish, adhere to and enforce **air quality standards**

Switch from kerosene lamps to **clean lighting technologies** like solar lights

Invest in **renewable energy**

Stop emissions of **climate pollutants** such as black carbon, ozone and methane to save lives and help **reduce global warming** by **0.5C**
